

QuickBase Customer Training

QuickBase Customer Training offers **highly interactive and engaging** instructor-led classes.

By attending these classes, you will:

-  Learn how to rapidly build, configure, and rollout custom business applications
-  Understand all the functionality that QuickBase has to offer
-  Accelerate your company's success by saving time and operating more efficiently
-  Walk away with best practices on how to use QuickBase

Learn from experts who know QuickBase better than anyone else. Our training classes consist of brief segments of instruction, followed by hands on activities. Class size is limited intentionally to 25 students to provide all attendees with a more intimate and custom learning experience that invites open conversation.

QuickBase Fundamentals

Who should take this course?

This course is designed for new or experienced App builders looking to develop a solid understanding of core QuickBase features and functionality.

What you will learn:

After completing this course, you will be able to design and build an app with multiple tables, customized forms, reports, and notifications. You will have a solid understanding of relationships between tables, how to apply roles and permissions, and how to create home pages. You will also understand the value in developing a detailed plan for your app and how to design with end users in mind.

Best for app builders who have...

- Less than 6 months of experience with QuickBase
- Not created or launched any apps
- No foundational skills on Quickbase features
- No familiarity with basic functionality and use cases

QuickBase Intermediate

Who should take this course?

For App builders with a solid understanding of QuickBase Fundamentals this course will introduce you to more complex functionality and use cases.

What you will learn:

After completing this course, you will have the ability to design and build complex applications. Building upon the knowledge gained in QuickBase Fundamentals, you will work through detailed exercises and advanced concepts to build more complex functionality into your QuickBase applications. You will understand how to use formulas to manage and report data. You will have the knowledge required to design effective forms to capture data, create dynamic reports and notifications, and manage visibility of data using roles and groups. You will also learn best practices to improve end user experience and adoption.

Best for app builders who have...

- At least 6 months of experience with QuickBase
- Designed and launched a few apps
- A solid understanding of core QuickBase features
- No familiarity with complex functionality and use cases
